Senior Software Engineer | Associate Technical Lead

As an Honors Computer Science & Engineering graduate from the University of Moratuwa, I bring over 5.5 years of rigorous analytical training and enterprise-scale execution to building high-throughput cloud architectures. I have built a career on technical adaptability, successfully pivoting from 2 years of developing low-latency market data backend infrastructure using Java, Spring Boot, and Solr at GTN, to 3.5 years of deep cloud engineering architecting serverless microservices and complex data hubs on AWS for global enterprises like Air Canada. Now, I am looking to scale my technical impact, drive architectural strategy, and take on end-to-end technical ownership as an Associate Technical Lead.

WORK EXPERIENCE

Serverless Guru • Remote • 02/2023 - Present

An advanced, serverless-first AWS cloud consultancy specializing in enterprise serverless architecture, microservices, and high-scale cloud transformations for global enterprise organizations and high-growth startups.

Senior Software Engineer / Cloud Consultant • Full-time

- Architected and engineered scalable serverless microservices and a central cloud Data Hub for **Air Canada** using the Serverless Framework, Node.js, and AWS Lambda to optimize airline data workflows.
- Designed high-throughput, real-time event ingestion data pipelines integrating **Apache Kafka** topics and **AWS Glue** ETL jobs to handle complex enterprise streams seamlessly into **Amazon S3**.
- Managed distributed search indexing and analytical querying patterns by designing and executing high-performance data pipelines into **Amazon OpenSearch Service**.
- Led a major corporate infrastructure database migration from **MySQL to PostgreSQL**, maintaining strict relational transaction limits and zero-downtime structural integrity.
- Constructed programmatic system monitoring dashboards and automated anomaly alert triggers using **Amazon CloudWatch**, drastically optimizing operation costs and lowering cloud resource footprints.
- Implemented low-latency internal data access bridges by developing **GraphQL APIs** to seamlessly unify external third-party enterprise storage hubs like SharePoint.

GTN Technologies (Previously Global Market Technologies) • Colombo, Sri Lanka • 06/2019 - 02/2023

A global fintech leader and institutional trading infrastructure provider connecting banks, asset managers, and wealth platforms to over 90 global capital markets via advanced e-trading engines.

Software Engineer • Full-time

- Engineered core real-time market data extraction components and OHLC layers to parse streaming feeds from stock exchanges.
- Designed data dissemination backend engines using **Java, Spring Boot, and WebSockets/TCP Sockets** for concurrent enterprise clients.
- Optimized text-search indexing speeds across database nodes by architecting wrappers around **Apache Solr** instances.
- Built asynchronous message queues using **Apache Kafka, AWS SQS, and AWS SNS** to handle background jobs.

Intern Software Engineer • Full-time

- Engineered automated log analysis and anomaly detection utilities for real-time market price backends while executing load/stress testing to optimize data throughput and platform stability under peak traffic spikes.

EDUCATION

Bachelor of Science (B.Sc. Hons) in Computer Science and Engineering

University of Moratuwa • Moratuwa, Sri Lanka • 09/2016 - 03/2021

* Completed intensive 4-year professional engineering curriculum specializing in advanced software architecture, data structures, cloud systems, and distributed computing databases.

G.C.E. Advanced Level Examination in (Physical Science Stream (Combined Mathematics, Physics, Chemistry))

Mo/Malwaththawala National School • Wellawaya, Sri Lanka • GPA: AAA • 01/2001 - 08/2014

* Achieved straight 'A' passes across all core technical subjects. Secured a highly competitive Z-Score of 2.3135, earning a District Rank of 2 out of thousands of candidates nationwide.

PROJECTS

Meridiano Ceylon – Tourism Booking Platform (www.meridianoceylon.com) • 04/2026 - 07/2026

Independent / Commercial Project

- **Technologies Used:** Next.js, React, TypeScript, Firebase, Tailwind CSS
- Architected a production Next.js travel platform with integrated Firebase cloud services—delivering dynamic tour package management, real-time booking enquiries, user authentication, and secure media asset storage.

Data Analytics & ML Platform • 05/2020 - 03/2021

University of Moratuwa (Final Year Research Project)

- **Technologies Used:** Apache Spark, NLP, Python, Machine Learning, Data Analytics
- Developed a final-year ML analytics framework using NLP and Apache Spark to process large-scale driver telemetry and feedback, computing real-time QoS scores and dynamic rankings.

MAS Holdings Quality Process Automation • 10/2020 - 12/2020

Fcode Labs

- **Technologies Used:** Flutter, Dart, Firebase
- Engineered a cross-platform Flutter/Dart app with Firebase integration to digitize garment evaluation workflows—automating scheduling, measurement logging, and photo capture—while developing a smart fashion tool to capture and visually compare clothing items.

VOLUNTEERING & LEADERSHIP

Department of Computer Science & Engineering, University of Moratuwa

Organizing Committee Member

Coordinated event logistics, technical showcases, and visitor engagement for Moratuwa's flagship CSE exhibition.

SKILLS

Cloud & Serverless Architecture: AWS (Lambda, CloudWatch, DynamoDB, Event-Driven Architecture, Glue, Microservices Architecture, OpenSearch, REST & GraphQL APIs, S3, Serverless Framework, SNS), SQS

Programming Languages: Dart, Java, JavaScript, Node.js, Python, SQL, TypeScript

Frameworks & Search Engines: Apache Solr, Express.js, Nest.js, Next.js, React, Spring Boot

Databases & Data Streaming: Amazon DynamoDB, Apache Kafka, Firebase, MySQL, PostgreSQL

DevOps, CI/CD & Tools: AWS CloudWatch Dashboards, Bamboo, Bitbucket, Docker, Git, Litestream

Personal Interests: Automotive Engineering & Mechanical Restorations, Open-Source Cloud Tooling, Travel & Outdoor Exploration
